

Junior Full-Stack Developer

Practical Assessment - Barber Shop Website

SUBMISSION REQUIREMENT

Submit **ONE** live website URL only. No source code, screenshots, ZIP files, PDFs, explanations, documentation, presentations or videos.

The Challenge

Design, build, test and deploy a complete professional website for a fictional barber shop. The finished product should feel like a real website that could be launched for an actual client.

No Tool Restrictions

There are no restrictions on the tools or resources you may use. You may use AI tools and coding assistants, ChatGPT or similar tools, IDEs, frameworks, libraries, templates, UI/component libraries, open-source packages, stock imagery, image-generation tools, design tools, documentation, search engines, GitHub, APIs, hosting platforms, any programming language, database, frontend technology or backend technology.

You are not being assessed on whether you can complete the project without assistance. You are being assessed on **what you can deliver**. You remain responsible for understanding, testing, correcting and completing anything produced with external assistance.

Website Brief

Create the barber shop's name, brand, logo, colour palette, services, prices, barber profiles, content, imagery, contact information, opening hours and location. Your choices should work together as one coherent brand.

Minimum Pages

Page	Minimum expectation
Home	Strong hero section, professional imagery, clear calls to action and an obvious route to booking.
Services	Present services and pricing professionally, such as haircuts, fades, beard trims, packages, kids cuts and other grooming services.
About	Introduce the barber shop, its story and/or its barbers.
Contact / Booking	Provide useful business information and a working booking experience.

Additional pages may be added where they improve the customer experience.

Branding & Visual Design

- **Logo:** Create an appropriate barber shop logo and incorporate it properly into the site, including the header where appropriate.
- **Colours:** Use a deliberate, consistent colour palette. Colour choices and contrast matter.

- **Typography:** Choose suitable fonts with clear hierarchy and good readability.
- **Images:** Use high-quality, relevant barber/barbershop imagery. Avoid stretched, pixelated, poorly cropped or irrelevant images.
- **Layout:** Spacing, alignment, section sizes, buttons and cards should feel intentional and consistent.

Header & Footer

- **Header:** Include branding/logo, working navigation to important pages and a clearly visible Book Now action. Mobile navigation must also work.
- **Footer:** Create a complete professional footer with appropriate navigation, contact details, opening hours, social links, booking link, legal links and copyright information.

Booking System

- The website must provide a **working booking experience**. A customer should be able to select or provide appropriate details such as service, barber where applicable, date, time and customer information.
- A button that only looks like a booking button but does nothing does not satisfy this requirement.

Calendar Integration - Required

- After choosing a booking date and time, the customer must be able to add that appointment to their calendar.
- If a customer books a haircut for **3:00 PM**, the generated calendar event must contain the correct appointment information.
- The solution must support convenient calendar use, including **Google Calendar and Apple Calendar-compatible calendar events**.
- The calendar event should carry through useful information such as barber shop name, service/appointment, selected date, correct start time, appropriate end time, location where applicable and useful appointment details.
- The calendar action must use the customer's selected booking details. Do not use one hard-coded appointment for every booking.

Popup / Modal

- Include at least one purposeful popup or modal. You decide its purpose - for example, a special offer, first-visit discount, booking promotion, newsletter/signup or opening announcement.
- The popup must fit naturally into the experience and the user must be able to close it.

Terms & Conditions

- Include proper Terms & Conditions that are accessible from the website, preferably through an appropriate legal link in the footer. Do not submit an empty placeholder legal page.

Responsive Design

- The website must work properly on **desktop, tablet and mobile**. Content must not overflow, navigation must remain usable, images should resize correctly, and forms and buttons must remain accessible.

Functionality & Testing

- Everything presented as interactive should work, including navigation, buttons, links, forms, booking, calendar functionality, popup, mobile menu, calls to action, legal links and social links where included.

- Before submission, test the complete journey: **Homepage -> Services -> Booking -> Select appointment -> Complete booking -> Add appointment to calendar.**
- The deployed website should not contain obvious JavaScript errors, broken images, missing pages, unfinished sections or development/debug information.

Deployment

- The website must be publicly accessible. Reviewers must not need to run the project locally, install dependencies, download files, request access or log into your development environment.

Assessment Areas

Area	What will be reviewed
Visual design	Colours, imagery, typography, spacing, consistency and overall presentation.
User experience	Navigation, clarity, responsiveness and ease of booking.
Functionality	Whether the website actually works as presented.
Booking experience	How effectively the booking journey has been implemented.
Calendar integration	Whether the selected appointment can correctly be added to the customer's calendar.
Attention to detail	Consistency, polish, content quality and handling of edge cases.
Technical quality	Reliability, responsiveness, performance and implementation quality observable from the delivered product.
Completeness	Whether the requirements have actually been delivered and tested.

Final Submission Rule

When you are finished, submit ONE LIVE WEBSITE URL.

Example: <https://your-barbershop.example>

That is all we want in your submission. Your work should speak for itself.
